

## Journey of a Cholesterol Test:

1 Blood sample is taken by Labtests phlebotomist at the collection centre.

2 The test request slip is scanned and sent electronically to Labtests laboratory to be entered into the system.

3 Labtests courier delivers sample to Labtests laboratory in Mt Wellington.

4 Specimen reception takes sample, checks all details and prepares sample for analysis.

5 Sample is placed on Siemens LabCell.

6 LabCell Analysers perform required tests.

7 Computer system alerts lab staff to any abnormal results.

8 Results are verified by scientists and pathologists and sent electronically back to patient's doctor via Healthlink.
